The development of information technology and artificial intelligence has brought about ground-breaking changes in the global industry sectors. The transformation of economic models accelerates electronic business activities which has yielded a robust demand for professionals in the related fields. Also, AI has become a key technology for the global digital economy of the future. MPU's will stride in with its solid foundation in the field hand in hand with its established R&D including the Engineering Research Centre of Applied Technology on Machine Translation and Artificial Intelligence, Ministry of Education, and the Centre for Artificial Intelligence Driven Drug Discovery.

Furthermore, MPU offers the first programme in computer education specialisation as well as the only gaming technology specialisation programme at undergraduate level in Macao. The Computing Programme has successfully achieved higher education academic accreditation granted by the Institution of Engineering and Technology (IET). Qualified graduates of the Programme partially fulfil the Chartered Engineer (CEng) educational requirement internationally, which will help them seek employment all over the world.

We have set up several research centres at our University through collaborations with numerous universities and major players in the industry. Students who are interested to pursue careers in the related fields could conduct research overseas and can finish their studies at prestigious universities by credit transfer. Our IT programmes provide the best learning environment for our students who can gain very solid knowledge necessary to begin their careers.

Over the years, we have cultivated many high-calibre graduates, many of whom now assume leadership positions at public, non-profit and social welfare organisations. Plenty of internship and employment opportunities are available. Through investigating and debating the latest issues and case studies, students will become familiarised with the theoretical foundations of their disciplines before moving on to learn about the operations, structures and cultures of various service organisations. Graduates will become competent professionals with strong commitments to their professional values and code of ethics.
